

May, 2014 - Online Banking Update

Effective Thursday, June 5, 2014, an image and passphrase will no longer be displayed on the password page. Once inside online banking, users are able to verify the site's identity and security by checking the browser's address box. The new Extended Validation (EV) certificate triggers web browsers to display a green address bar and our site provider's name. Fiserv, Inc is our site provider, and if it's green, your connection is safe. Depending on your internet browser the EV certificate may display differently. The enhancement uses advanced device forensics that seamlessly authenticates the connection to your tablet, computer or phone. Please contact 920-230-1300 with any questions.
